

Auditor Support Tool

PDF Viewer Test Manual

Purpose of this document

This temporary manual is included only to test how bundled manuals open inside the Auditor Support Tool. It is not the final user manual.

Checks to perform

1	Open the manual from About > Manuals.
2	Confirm that it opens inside the application.
3	Scroll through both pages.
4	Use Zoom In and Zoom Out.
5	Use Fit Width.
6	Select Back to Manuals.
7	Navigate elsewhere and confirm the PDF closes.

Expected result

The document should render clearly, remain readable at different zoom levels, and return to the Manuals catalogue without opening an external PDF application.

Second-page rendering check

This second page confirms that multi-page scrolling is working. The embedded viewer should display this page immediately below the first page when MultiPage mode is enabled.

Memory-use check

After leaving the PDF viewer, navigate to Dashboard and confirm that the document is no longer shown. The application should keep only one PDF document loaded at a time.

Test status

Record the test as successful when the PDF opens, scrolls, zooms, fits to width, returns to Manuals, and closes when navigating away.
